## Introduction

This is a guide to install, configure and customize YG themes. Most of the YG themes are built using paragraph modules that is popular in Drupal 8 community.

# Structure of YG theme

Download the `zip` archive of the theme demo from the link provided in theme project page.

The `zip` file downloaded will have following structure:

```
./yg-theme-name
```

```
./yg-theme-name.sql
```

```
./yg-theme-installation-and-usage.pdf
```

- A single top level directory/folder ( `yg-theme-name` ) contains the [docroot] of the Drupal theme site, including `index.php` , modules, themes, etc.
- The uncompressed MySQL dump file named `yg-theme-name.sql` is located in the root of the `.zip` file. This file can have any name, but must have an `.sql` extension.

# Installing and configuring YG theme

- Extract the top level directory/folder ( `yg-theme-name` ) in your web accessible folder such as `public_html` or `var/www/html/` (local)
- Create a new database and import `yg-theme-name.sql` in the newly created database.
- Copy the `default.settings.php` file available in `sites/default/` folder and rename it as `settings.php`
- Change the configuration of database connection in the `settings.php` file. An example for database connection:

```
$databases['default']['default'] = array (  
  'database' => 'db_name', // change it  
  'username' => 'db_user', //change it  
  'password' => 'db_password', // change it  
  'prefix' => '',  
  'host' => 'localhost',  
  'port' => '3306',  
  'namespace' => 'Drupal\\Core\\Database\\Driver\\mysql',  
  'driver' => 'mysql',  
);
```

# YG Theme customization

You are able to customize every sections in the YG theme. If you need to make code level changes, please create a subtheme with the `yg_theme` as a base theme. Here is the [guide to create a subtheme](#).

# Customize site name and logo

## Changing the site name & slogan

The identity of the site can be changed in the `Site name` and `Slogan` field at `admin/config/system/site-information` path

### ▼ SITE DETAILS

#### Site name \*

#### Slogan

How this is used depends on your site's theme.

#### Email address \*

The *From* address in automated emails sent during registration and new password requests, and other notifications. (being flagged as spam.)

## Changing the site logo

The site logo can be change in the `Appearance > Settings > YG theme` menu.

### ▼ LOGO IMAGE

Use the logo supplied by the theme

#### Path to custom logo

Examples: `logo.svg` (for a file in the public filesystem), `public://logo.svg`, or `core/themes/seven/logo.svg`.

#### Upload logo image

 No file chosen

If you don't have direct file access to the server, use this field to upload your logo.

# Customize Header & Footer menu
